6.6 Youth Leadership Summit

Youth are the most important and dynamic segment of the population in any country. It is believed that developing countries with large youth population could see tremendous growth, provided they invest in young people's education, and their development. We can undoubtedly say that today's young are tomorrow's innovators, creators, builders and leaders.

In today's scenario, the system puts much emphasis on academic performance that it prevents students to nurture their leadership skills & creativity and gaining necessary awareness about social issues in their country. Consequently, these youths graduate from college to become passive employees rather than agents of change - initiators, leaders or creators - those who are willing to take action for causes they care about.

ICT Academy Youth Leadership Summit hopes to address this problem by creating a space for students to gain more leadership skills and be exposed to social issues in their country, as well as potential approaches and necessary mindsets to initiate social change.

Thus through hands-on leadership experiences, inspirational speakers, and peer discussion, students were empowered to dream and plan for leadership impact in their institutions, career, community and beyond! The summit was a transformational experience that will further develop each student's sense of mission and purpose.

6.7 Youth Entrepreneurship Summit

Globalization reshapes the international economic landscape and technological change creates greater uncertainty in the world economy, youth entrepreneurship is believed to offer new ways to meet economic, social and environmental challenges. Entrepreneurship is gaining added attention in the present economic scenario. Entrepreneurship is not only a key facet of economic dynamism but also an imperative for economic growth, productivity, innovation and employment.

Understanding this, the Government of India has undertaken several initiatives and instituted policy measures such as Startup India, Stand-Up India and ATAL Innovation Mission etc., to foster a culture of innovation and entrepreneurship in the country. With a significant and unique demographic advantage, India, however, has immense potential to innovate, raise entrepreneurs and create jobs for the benefit of the nation and the world.

But does our youth have the real exposure on what it takes to be a successful entrepreneur? Entrepreneurship is not in a gene; it is the spirit, and the willingness to learn from mistakes is what makes a successful entrepreneur.

ICT Academy Youth Entrepreneurship Summit 2018, created an environment that triggers the spirit of entrepreneurship among the youth and foster their passion towards entrepreneurship. The summit comprised of plenary sessions with leading entrepreneurs, breakout sessions on the various aspects of tech entrepreneurship, discussion on entrepreneurship and its societal impact and so on. The participants came face to face with thought leaders and practitioners from all walks of life, ranging from business, academia, and civil society that would help them to acquire the traits of entrepreneurship such as self-confidence, willingness to take risks, perseverance, self-reliance and the thrust to achieve.

6.8 Youth Innovation Summit

We are entering a new creative industrial age which is characterized by constant innovation and accelerating change. Successful companies will be those that can adapt quickly and embrace people with suitable skills. Needless to say, innovation is quickly becoming a survival skill for next generation leaders.

For today's youth, innovation means providing ideas out of the blue, leading to significant discoveries and achievements. However, there's more to it than that. Innovation is not necessarily coming out with all new product or service, it can be a minor change in business process or service model that add value in terms of efficiency, productivity and quality. Therefore, innovation is not a one time achievement, it is a habit and should always be a part of one's approach.

Therefore, to imbibe the traits of innovation among the youth, ICT Academy organized Youth Innovation Summit 2019 for the students of higher education. The Summit provided a rich, collaborative environment exposing them to innovative ideas and processes that will ignite their interests and get prepared for their future careers.

Summit connected students with young entrepreneurs, innovation experts and leaders in the public and private sectors and provided the platform to discuss, get inspired and to identify the key mantras of innovation that would eventually transform their future.

EDUCATION 2025 - Preparing for the Fourth Industrial Revolution

Learning technologies, and changing pedagogical methods, are not only changing the way we teach but also the physical environments we teach in. Higher education in the fourth industrial revolution is a complex, dialectical and exciting opportunity which can potentially transform society for the better.

The fourth industrial revolution is said to be ushered in by advancements in robotics, virtual reality, cloud technology, big data, artificial intelligence, the Internet of Things and other technologies. It is characterized by the fusion of technologies and the blurring of the lines between the physical, digital and biological aspects of life.

These technologies are predicted to have a significant effect on our daily lives, including the way we learn, especially if we are to prepare the younger generation and re-educate the current generation for changing work, social and cultural environments. The recommendation for education echoes the conversation on 21st century skills with its focus on closing the digital divide, ICT competencies, the use of open educational resources, e-learning and mobile learning to increase access to and the quality and relevance of the education system.

In order to educate for the fourth and future industrial revolutions, there is a need to embrace the technologies associated with them. Education systems, programs and curricula need to be flexible, allowing for students interests and needs.

ICT Academy in association with InfoComm India 2018 presented exclusive education summit on the theme Education 2025 - Preparing for the Fourth Industrial Revolution on 19th September 2018 at Bombay Exhibition Centre, Mumbai. The Summit brought together Academic Leaders, industry experts and Government policy makers to address the challenges faced by academia in the era of Fourth Industrial Revolution and thus creating a correlated education ecosystem in India.
